The Ravaging Tide: Strange Weather, Future Katrinas, and the Coming Death of America's Coastal Cities Mike Tidwell

The question on every American's mind: Can Katrina happen to me where I live? The answer, unfortunately, is yes, yes, and again yes. If you are one of the 150 million Americans who live within 100 miles of a coastline -- and even if you live much farther inland -- you could be inhabiting the next New Orleans. The bad news for you is that there are even more studies full of even more scientific data confirming this fact than the studies predicting Katrina prior to 2005.

The issue this time is global warming. We are literally altering the sky above us. And be assured: This is not some "junk theory" peddled by Greenpeace extremists. No less an authority than the Bush Administration itself has officially confirmed, on multiple occasions, that global warming is real and is driven by our use of fossil fuels -- oil, coal, and natural gas. Worldwide, thanks to climate change, sea level is expected to rise up to three feet within the coming decades and extreme weather events will significantly increase, according to the Bush Administration.

These two factors -- more intense storms and rising ocean levels -- mean we are rapidly turning every coastal city in America into another New Orleans.
