Intelligent Signal Processing

Intelligent Signal Processing

"IEEE Press is proud to present the first selected reprint volume devoted to the new field of intelligent signal processing (ISP). ISP differs fundamentally from the classical approach to statistical signal processing in that the input-output behavior of a complex system is modeled by using "intelligent" or "model-free" techniques, rather than relying on the shortcomings of a mathematical model. Information is extracted from incoming signal and noise data, making few assumptions about the statistical structure of signals and their environment.

Intelligent Signal Processing explores how ISP tools address the problems of practical neural systems, new signal data, and blind fuzzy approximators. The editors have compiled 20 articles written by prominent researchers covering 15 diverse, practical applications of this nascent topic, exposing the reader to the signal processing power of learning and adaptive systems.

This essential reference is intended for researchers, professional engineers, and scientists working in statistical signal processing and its applications in various fields such as humanistic intelligence, stochastic resonance, financial markets, optimization, pattern recognition, signal detection, speech processing, and sensor fusion. Intelligent Signal Processing is also invaluable for graduate students and academics with a background in computer science, computer engineering, or electrical engineering.

About the Editors

Simon Haykin is the founding director of the Communications Research Laboratory at McMaster University, Hamilton, Ontario, Canada, where he serves as university professor. His research interests include nonlinear dynamics, neural networks and adaptive filters and their applications in radar and communications systems. Dr. Haykin is the editor for a series of books on "Adaptive and Learning Systems for Signal Processing, Communications and Control" (Publisher) and is both an IEEE Fellow and Fellow of the Royal Society of Canada.

Bart Kosko is a past director of the University of Southern California's (USC) Signal and Image Processing Institute. He has authored several books, including Neural Networks and Fuzzy Systems, Neural Networks for Signal Processing (Publisher, copyright date) and Fuzzy Thinking (Publisher, copyright date), as well as the novel Nanotime (Publisher, copyright date). Dr. Kosko is an elected governor of the International Neural Network Society and has chaired many neural and fuzzy system conferences. Currently, he is associate professor of electrical engineering at USC."

They are reading whatever they have because their hobby will be reading a book. How about the person who don't like looking at a book? Sometime, person feel need book once they found difficult problem or perhaps exercise. Well, probably you will need this Intelligent Signal Processing.

Daniel McCullough:

What do you regarding book? It is not important along? Or just adding material when you really need something to explain what the one you have problem? How about your time? Or are you busy person? If you don't have spare time to perform others business, it is gives you the sense of being bored faster. And you have time? What did you do? All people has many questions above. The doctor has to answer that question due to the fact just their can do in which. It said that about e-book. Book is familiar on every person. Yes, it is suitable. Because start from on kindergarten until university need that Intelligent Signal Processing to read.

Ruth Santiago:

Beside this Intelligent Signal Processing in your phone, it could possibly give you a way to get nearer to the new knowledge or info. The information and the knowledge you might got here is fresh from the oven so don't possibly be worry if you feel like an outdated people live in narrow commune. It is good thing to have Intelligent Signal Processing because this book offers to you readable information. Do you at times have book but you seldom get what it's exactly about. Oh come on, that won't happen if you have this within your hand. The Enjoyable agreement here cannot be questionable, like treasuring beautiful island. So do you still want to miss that?
