Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics)

Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics)

The advent of augmented reality technologies used to assist human operators in complex manipulative operations—has brought an urgency to research into the modeling and training of human skills in Virtual Environments. However, modeling a specific act still represents a challenge in cognitive science. The same applies for the control of humanoid robots and the replication of skilled behavior of avatars in Virtual Environments.

Skill Training in Multimodal Virtual Environments presents the scientific background, research outcomes, engineering developments, and evaluation studies conducted during the five years (2006-2011) of the project SKILLS–Multimodal Interfaces for Capturing and Transfer of Skill, funded by the European Commission under its 6th Framework Programme for Research and Technological Development. The SKILLS project evaluated how to exploit robotics and virtual environment technologies for the training of specific skills. This book details the novel approach used in the study to cope with skill acquisition, setting aside the mainstream assumptions of common computer-assisted training simulators. It explores how the SKILLS approach generated new training scenarios that allow users to practice new experiences in the performance of the devised task.

Using a carefully designed approach that balances science with practicality, the book explores how virtual and augmented reality systems can be designed to address the skill transfer and training in different application contexts. The application of the same roadmap to skills originating from domains such as sports, rehabilitation, industrial environment, and surgery sets this book apart. It demonstrates how technology-oriented training conditions can yield better results than more traditional training conditions.

From reader reviews:

Martha Silva:

What do you concentrate on book? It is just for students because they're still students or that for all people in the world, the particular best subject for that? Only you can be answered for that concern above. Every person has different personality and hobby for each and every other. Don't to be compelled someone or something that they don't wish do that. You must know how great in addition to important the book Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics). All type of book would you see on many solutions. You can look for the internet solutions or other social media.

Salvatore Anthony:

Book is to be different for each grade. Book for children until eventually adult are different content. To be sure that book is very important usually. The book Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics) has been making you to know about other information and of course you can take more information. It is extremely advantages for you. The publication Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics) is not only giving you much more new information but also to get your friend when you sense bored. You can spend your spend time to read your guide. Try to make relationship together with the book Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics). You never sense lose out for everything when you read some books.

John Starr:

Here thing why that Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics) are different and dependable to be yours. First of all studying a book is good but it really depends in the content from it which is the content is as delightful as food or not. Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics) giving you information deeper as different ways, you can find any reserve out there but there is no e-book that similar with Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics). It gives you thrill looking at journey, its open up your current eyes about the thing that will happened in the world which is might be can be happened around you. It is possible to bring everywhere like in area, café, or even in your method home by train. For anyone who is having difficulties in bringing the printed book maybe the form of Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics) in e-book can be your choice.

William Matthews:

The book untitled Skill Training in Multimodal Virtual Environments (Human Factors and Ergonomics) contain a lot of information on it. The writer explains her idea with easy method. The language is very straightforward all the people, so do definitely not worry, you can easy to read it. The book was published by famous author. The author provides you in the new time of literary works. You can read this book because you can keep reading your smart phone, or model, so you can read the book with anywhere and anytime. If

you want to buy the e-book, you can start their official web-site and order it. Have a nice examine.
